Kerish Products presents the latest version of its integrated computer care solution, Kerish Doctor 2013.

31 May 2013

Kerish Products developer team announces that its integrated computer care solution, Kerish Doctor 2013, has been updated to version 4.50.

The product is positioned as a unique combination: Maintenance + Cleaning + Optimization + Protection. It includes a large number of useful developments that are unmatched in this field.

Thanks to its unique Real-time Failure Detection System, the program averts operating system crashes in real time, and also reliably repairs errors in the system registry.

The application regularly carries out a safe, high-quality cleansing of the system to remove any digital 'junk' that has accumulated, and also optimizes performance.

Kerish Doctor 2013 also protects your computer from harmful programs and potential malware by checking the computer's important security parameters and analysing installed software for malware.

The Smart Update system, regularly added to by the developer team, provides timely updates to the application's database. Thanks to this system, the effectiveness of the installation constantly increases—making it the most future-proof application in its class.

The new product adds: testing of installed software for infections; new tools for experienced users to work with the operating system; improved error correction and computer temperature control; new 'intelligent' game speedup; an improved computer protection component; and an improved real-time crash detection system.
